#### **About Us**

- In this page information about project is given
- Also informations about libraries that are used in database and links of them are given

#### INFORMATION ABOUT E-LIBRARY PROJECT

The aim of this project is providing whole library system which is accessible via web. Users will be able to see sources (book, e-book, DVD, magazine etc.) and if users are member of the system, they will be rent sources. Users will be able to find the location of the sources from website and they can take actual material from library. If a user wants to use electronic sources from website, he/she will be able to find information about electronic source and a link of the electronic source. The system will have administrator users. Administrator users will be able to control the system (adding source, deleting source, updating source,). The system will have different searching types (type of source and genre of search). In addition, popular sources will be listed on the website according to popular search topics and popular rented sources. If a user does not enter the system for a year, account of the user will be deleted by the system.

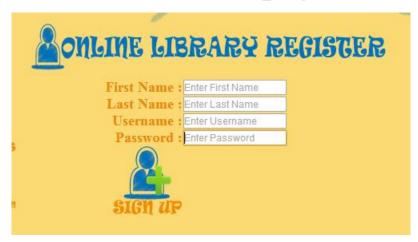

#### CONTACK INFORMATION ABOUT LIBRARIES

Admin can see requests and suggestions in this page.

Also admin can delete this requests and suggestions.

# Database Tables

#### users

• This table stores user data. Informations in this table as follows:

| Name                  | Type        | Not Null       | Primary Key |
|-----------------------|-------------|----------------|-------------|
| user_id               | İnt(11)     | Auto increment | 1           |
| user_nickname         | Varchar(45) | 1              | 0           |
| user_name             | Varchar(45) | 1              | 0           |
| user_surname          | Varchar(45) | 1              | 0           |
| user_password         | Varchar(45) | 1              | 0           |
| user_authority_state  | bit(1)      | 1              | 0           |
| user_last_access_time | Datetime    | 1              | 0           |
| user_point            | Varchar(45) | 1              | 0           |

- user\_authority\_state: information about user that is normal user or admin.
- user\_last\_access\_time: last access time of user. This information used for deleting user that does not enter website for over a year.
- user\_point : penalty point. This points are deleted only by admin.

## logs

• This table stores data about login procedure and sources that are rented. Informations in this table as follows:

| Name                    | Type    | Not Null | Primary Key |
|-------------------------|---------|----------|-------------|
| log_id                  | İnt(11) | 1        | 1           |
| user_id                 | İnt(11) | 1        | 0           |
| record_id               | İnt(11) | 1        | 0           |
| renting_date            | date    | 1        | 0           |
| expected_returning_date | date    | 1        | 0           |
| returning_date          | date    | 1        | 0           |

- renting\_date: if user rents a source, this shows renting date
- expected\_returning\_date : expected return date of rented source
- user\_authority\_state : return date of rented source

#### types

• This table stores data about source type. Informations in this table as follows:

| Name      | Type        | Not Null | Primary Key |
|-----------|-------------|----------|-------------|
| type_id   | İnt(11)     | 1        | 1           |
| type_name | Varchar(45) | 1        | 0           |

• type\_name : contains types. Ex: book, DVD, magazine

#### books

• This table stores book's data. Informations in this table as follows:

| Name                  | Туре        | Not Null       | Primary Key |
|-----------------------|-------------|----------------|-------------|
| book_id               | İnt(11)     | Auto increment | 1           |
| book_name             | Varchar(45) | 1              | 0           |
| author_id             | İnt(11)     | 1              | 0           |
| book_publication_year | Year(4)     | 1              | 0           |
| book_ISBN             | Varchar(45) | 1              | 0           |
| book_rental_count     | İnt(11)     | 1              | 0           |
| book_category_id      | İnt(11)     | 1              | 0           |

- book\_rental\_count : renting number of books and used for displaying most popular books
- author\_id : author id connects books table with authors table

### book\_categories

• This table stores data about book categories. Informations in this table as follows:

| Name                | Туре        | Not Null       | Primary Key |
|---------------------|-------------|----------------|-------------|
| book_categorie_id   | İnt(11)     | Auto increment | 1           |
| book_categorie_name | Varchar(45) | 1              | 0           |

• book\_categorie\_name : used for categorizing books. Ex : novel, science.

#### authors

• This table stores data about writers of books. Informations in this table as follows:

| Name               | Type        | Not Null       | Primary Key |
|--------------------|-------------|----------------|-------------|
| author_id          | İnt(11)     | Auto increment | 1           |
| author_name        | Varchar(45) | 1              | 0           |
| author_information | mediumtext  | 1              | 0           |

author\_information: brief information about author

### magazines

• This table stores magazine data. Informations in this table as follows:

| Name                      | Туре        | Not Null       | Primary Key |
|---------------------------|-------------|----------------|-------------|
| magazine_id               | İnt(11)     | Auto increment | 1           |
| magazine_name             | Varchar(45) | 1              | 0           |
| magazine_issue_number     | İnt(11)     | 1              | 0           |
| magazine_publication_date | Date        | 1              | 0           |
| magazine_rental_count     | İnt(11)     | 1              | 0           |
| magazine_category_id      | İnt(11)     | 1              | 0           |

- magazine\_issue\_number: issue number of magazine
- magazine\_rental\_count : renting number of magazines and used for displaying most popular magazines

#### magazine\_categories

• This table stores data about magazine categories. Informations in this table as follows:

| Name                    | Type        | Not Null       | Primary Key |
|-------------------------|-------------|----------------|-------------|
| magazine_categorie_id   | İnt(11)     | Auto increment | 1           |
| magazine_categorie_name | Varchar(45) | 1              | 0           |

 magazine\_categorie\_name: used for categorizing magazines. Ex: politic, comic.

#### **DVDs**

• This table stores DVD's data. Informations in this table as follows:

| Name                  | Type        | Not Null       | Primary Key |
|-----------------------|-------------|----------------|-------------|
| DVD_id                | İnt(11)     | Auto increment | 1           |
| DVD _name             | Varchar(45) | 1              | 0           |
| DVD _duration         | İnt(11)     | 1              | 0           |
| DVD _publication_date | Date        | 1              | 0           |
| DVD _rental_count     | İnt(11)     | Default "o"    | 0           |
| DVD _category_id      | İnt(11)     | 1              | 0           |

• DVD\_rental\_count : renting number of DVDs and it is used for displaying most popular DVDs

### DVD\_categories

• This table stores data about categories of DVDs. Informations in this table as follows:

| Name              | Туре        | Not Null       | Primary Key |
|-------------------|-------------|----------------|-------------|
| DVD_category_id   | İnt(11)     | Auto increment | 1           |
| DVD_category_name | Varchar(45) | 1              | 0           |

• DVD\_category\_name : used for categorizing DVDs. Ex : movie, song, game.

#### records

• This table stores data about sources and type of this sources. Informations in this table as follows:

| Name                | Type    | Not Null       | Primary Key |
|---------------------|---------|----------------|-------------|
| record_id           | İnt(11) | Auto increment | 1           |
| type_id             | İnt(11) | 1              | 0           |
| x_id                | İnt(11) | 1              | 0           |
| Physical_electronic | bit(1)  | 1              | 0           |

- type\_id : type of record. Ex : book,DVD, magazine
- physical-electronic : record is physical or electronic
- x\_id : connects records table with source's table

#### bookcases

• This table stores data about bookcases and this informations are used for locating books. Informations in this table as follows:

| Name          | Туре        | Not Null       | Primary Key |
|---------------|-------------|----------------|-------------|
| bookcase_id   | İnt(11)     | Auto increment | 1           |
| floor _name   | İnt(11)     | 1              | 0           |
| bookcase_name | Varchar(10) | 1              | 0           |

floor\_name: floor name that is bookcase in.

#### bookshelves

• This table stores data about bookshelves and this informations are used for locating bookcases. Also bookshelves have limit. Informations in this table as follows:

| Name           | Type        | Not Null       | Primary Key |
|----------------|-------------|----------------|-------------|
| bookshelf_id   | İnt(11)     | Auto increment | 1           |
| bookcase_id    | İnt(11)     | 1              | 0           |
| bookshelf_name | Varchar(10) | 1              | 0           |
| book_limit     | İnt(11)     | 1              | 0           |

- bookcase\_id : bookcase id that is bookshelf in there
- book\_limit: maximum number of book that bookshelf can contain.

#### floors

• This table stores data about floors that libraries have. Informations in this table as follows:

| Name       | Туре        | Not Null       | Primary Key |
|------------|-------------|----------------|-------------|
| floor_id   | İnt(11)     | Auto increment | 1           |
| library_id | İnt(11)     | 1              | 1           |
| floor_name | Varchar(45) | 1              | 1           |

• library\_id: library that's contains that floor

#### libraries

• This table stores library data. Informations in this table as follows:

| Name            | Type        | Not Null       | Primary Key |
|-----------------|-------------|----------------|-------------|
| library_id      | İnt(11)     | Auto increment | 1           |
| library_name    | Varchar(45) | 1              | 0           |
| library_address | Varchar(45) | 1              | 0           |

#### electronic\_resources

• This table stores data about sources that are electronic. Informations in this table as follows:

| Name      | Type        | Not Null       | Primary Key |
|-----------|-------------|----------------|-------------|
| record_id | İnt(11)     | Auto increment | 1           |
| url       | Varchar(45) | 1              | 0           |

• url: users can reach sources on internet using url

### physical\_resources

• This table stores data about sources that are physical. Informations in this table as follows:

| Name           | Туре    | Not Null       | Primary Key |
|----------------|---------|----------------|-------------|
| record_id      | İnt(11) | Auto increment | 1           |
| bookshelf_id   | İnt(11) | 1              | 0           |
| book_column    | İnt(11) | 1              | 0           |
| current_log_id | İnt(11) | 1              | 0           |

#### waiting\_resources

• This table stores data about users that are waiting for sources. Informations in this table as follows:

| Name      | Type    | Not Null | Primary Key |
|-----------|---------|----------|-------------|
| user_id   | İnt(11) | 1        | 1           |
| record_id | İnt(11) | 1        | 1           |

record\_id : source that is users waiting for

### suggestions

• This table stores suggestions that are going to send to admin. Informations in this table as follows:

| Name          | Type    | Not Null | Primary Key |
|---------------|---------|----------|-------------|
| suggestion_id | İnt(11) | 1        | 1           |
| suggestion    | text    | 1        | 0           |
