ARM Inc.

Human Resources Department

Cambridge, UK

Job ID: 4893

Dear HR Manager:

      I am writing to you in response to your online advertisement on your website for graduate hardware engineer at systems & software department. The advertisement caught my attention because it perfectly matches my qualifications and I am very interested in this position. My bachelor's degree in computer engineering supplies your requirements. Also, I am aware of that being a part of Arm Inc. is an invaluable chance to improve my technical skills.

      My background on computer organization, architecture, micro-architecture and qualification in digital design appear to be well suited to requirements. I am confident that I will make a significant contribution on:

- Computer organization, architecture and micro architecture

- C/C++, Python and Linux system development

- Digital design and RTL design with Verilog

- Experience with Altera & Xilinx FPGA devices and their synthesis and simulation tools

      I always wanted to learn how computers really work and I always enjoyed learning computer architecture in college. I did my graduation project on computer architecture and I used ARM architecture as a reference architecture. I want to work and learn about it more and I definitely want to make my career on this area.

      Please refer to the attached resume to provide you with further details of my qualifications, in consideration for this position.

Thank you for your time and consideration.

Sincerely,

Signature
