Location: London, GB

Job Category: Software Engineering: Development
Position Type: Full Time, Employee
Location: London, GB
Job ID: 782805-72916

For more than 50 years, Bio-Rad has been at the center of scientific discovery, providing a broad range of innovative tools and services for clinical diagnostics and life science research. The company is renowned among hospitals, universities, major research institutions, biotechnology companies and pharmaceutical firms for its commitment to quality and customer service. At Bio-Rad, you will participate in exciting new developments at the cutting edge of science and technology. If you want to join a company of great minds doing extraordinary things, then Bio-Rad is the place for you.

As the SQL Server, you will be responsible for the following:

- Design, install, monitor, maintain, and performance tune production databases while ensuring high levels of data availability.
- Troubleshoot production processes and solve problems in real-time.
- Write code for database access, modifications, and constructions including stored procedures.
- Work with application development staff to develop database architectures, coding standards, and quality assurance policies and procedures.
- Develop, implement, and oversee database policies and procedures to ensure integrity and availability of databases and their accompanying software.
- Support the production database systems and respond to and resolve production issues.
- Monitor database system details within the database, including stored procedures and execution time, and implement efficiency improvements.
- Conduct maintenance tasks.
- Organize work priorities and manage time effectively.

Experience Required
- A College degree in the field of computer science and /or 2 years equivalent work experience is required.
- 2+ years database administration experience.
- Additional experience includes, but is not limited, to administering multiple server instances;
    - High Availability and Load-balancing architectures;
    - Knowledge of Windows enterprise server administration;
    - Setting up of different replication types;
    - Experience with Oracle database a plus with all versions.
- The successful candidate should also have experience performing database backup and recovery and planning backup policies.
- Ability to test designed applications, utilizing database management software or general programming software
- Performing database and application performance/tuning and managing and troubleshooting SQL server in a clustered / multiple server environments.

Candidate Pofile

- Strong analytical and problem solving skills with attention to detail and accuracy
- Good organization skills and ability to manage multiple competing tasks and priorities

- Effective interpersonal skills and the ability to communicate (written and oral) effectively with technical and support groups
- Focus on customer service

If you are positive, enthusiastic, energetic and self-motivated this is the opportunity for you to consider
